

$\ell^3 = f(k \rightarrow 0)/(\eta_{\text{eq}} n)$, η_{eq} = ideal-Bose condensed fraction at the initial E/N: Measured state D 0.506
 Bare WKE; standard accuracy; rate from the collision term

Marker: initial state
 ○ Measured state D, E/N = 12 nK

Colour: scattering length

● $a = 100 \text{ a}_0$
 ● $a = 140 \text{ a}_0$
 ● $a = 150 \text{ a}_0$
 ● $a = 200 \text{ a}_0$
 ● $a = 280 \text{ a}_0$
 ● $a = 300 \text{ a}_0$
 ● $a = 400 \text{ a}_0$
 ● $a = 570 \text{ a}_0$
 ● $a = 600 \text{ a}_0$
 ● $a = 800 \text{ a}_0$

| bars: uncertainty

Guides

— 3.4 (measured D, in $\hbar/m$)
