

$n_k/(\eta_{eq} n)$, η_{eq} = ideal-Bose condensed fraction at the initial E/N; plateau = ℓ^3
 n_k at fixed k_p (runs with $k_p < k_\xi$ only); Bare WKE; standard accuracy; interpolated between snapshots

Line: initial state
 — Measured state D, E/N = 12 nK, $\eta_{eq} = 0.506$

Colour: scattering length
