

$\ell^3 = f(k \rightarrow 0)/(\eta_{\text{eq}} n)$, η_{eq} = ideal-Bose condensed fraction at the initial E/N: Measured state D, 150 a₀ 0.513, Measured state D, 600 a₀ 0.518, Measured state D, 300 a₀ 0.517

Bubble chain, $N \rightarrow \infty$; standard accuracy; rate from the collision term

Marker: initial state

- Measured state D, 150 a₀, E/N = 11 nK
- Measured state D, 600 a₀, E/N = 11 nK
- △ Measured state D, 300 a₀, E/N = 12 nK

Colour: scattering length

- a = 150 a₀
- a = 300 a₀
- a = 600 a₀
- | bars: uncertainty

Guides

- 3.4 (measured D, in $\hbar/m$)
