

$\ell^3 = f(k \rightarrow 0)/(\eta_{\text{eq}} n)$, η_{eq} = ideal-Bose condensed fraction at the initial E/N: Measured state C3 0.618, Measured state C2 0.601, Measured state C1 0.594

Heuristic C, fitted; draft accuracy; rate from the collision term

Marker: initial state
 ○ Measured state C3, E/N = 20 nK
 □ Measured state C2, E/N = 21 nK
 △ Measured state C1, E/N = 22 nK

Colour: scattering length

● $a = 50 \text{ a}_0$
 ● $a = 70 \text{ a}_0$
 ● $a = 100 \text{ a}_0$
 ● $a = 140 \text{ a}_0$
 ● $a = 200 \text{ a}_0$
 ● $a = 280 \text{ a}_0$
 ● $a = 400 \text{ a}_0$
 | bars: uncertainty
