

IR shape against the measured spectra. Heuristic C, fitted, Bose +1; WKE  $\ell^3 = f_0/(\eta_{eq} n)$ ; the published  $\ell$  is deconvolved (not undone here)

IR shape  $n_k \propto 1/(1 + (k/k_0)^\kappa)$ , 100  $a_0$ ; fit on  $k < k_\xi/3$ ,  
error  $\oplus$  half the spread over  $k_\xi/4$  to  $k_\xi/2$

$\kappa$  at the last WKE snapshot (filled) and the last Fig 1d spectrum (open)

$n_k$  at  $k_p \ll k_\xi$ , matched in  $\ell$  (not in t)
