

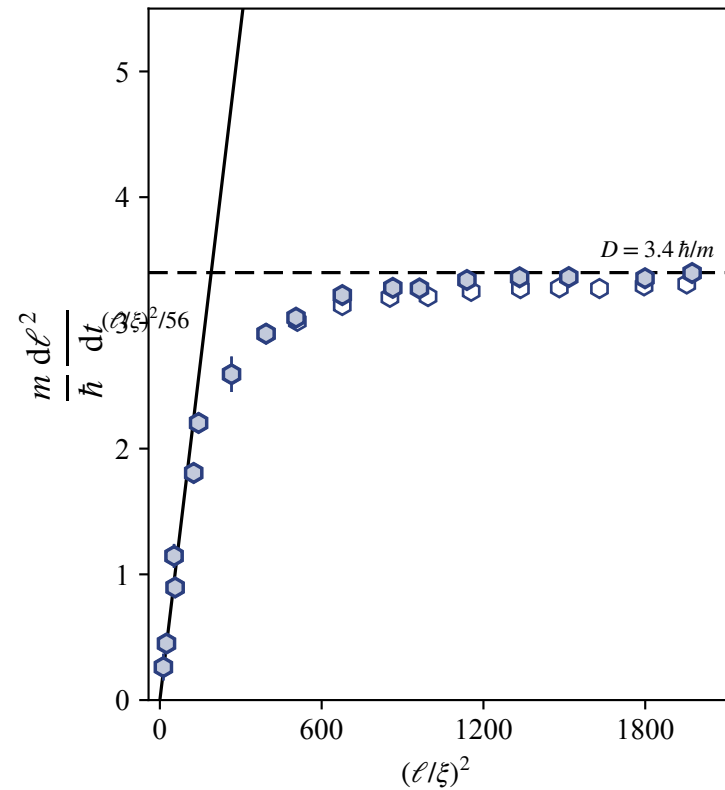

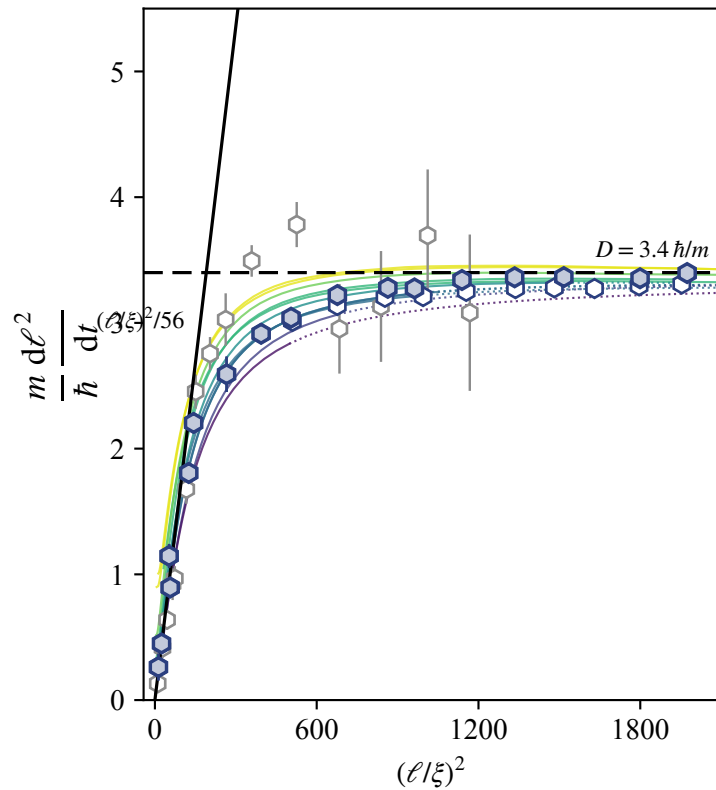

Fig 4c analogue. WKE Bubble chain, $N \rightarrow \infty$, Bose +1, standard; $\ell^3 = f_0/(\eta_{\text{eq}} n)$; the published ℓ carries a deconvolution that is not undone; WKE rates divided by 3.3

WKE, 11 series pooled at the measured times, rate / 3.3

WKE with the published points and the WKE series

- WKE, binned, $\ell^3 \leq V$, rate / 3.3
- WKE, binned, all samples, rate / 3.3
- published
- WKE, one series
- ⋯ same, past $\ell^3 = V$
- $\tau = 56 t_\xi$
- - $D = 3.4 \hbar/m$
